

# Exporting Reports

**AiVRIC Analytics & Compliance**

## Purpose

AiVRIC enables users to export security, risk, and compliance data into shareable report formats to support **audits, executive reporting, remediation tracking, and managed service delivery**.

Exports are available across **Compliance, Findings, and Analytics** views, ensuring consistent, repeatable reporting aligned to organizational needs.

---

## Export Locations & Supported Views

Reports can be exported from the following areas within AiVRIC:

- **Compliance Dashboards**
- **Findings & Risk Tables**
- **Overview & Analytics Dashboards**

Exports always reflect the **currently applied filters**, ensuring reports match the scoped view being analyzed.

---

## Compliance Report Exports

### Purpose

Compliance exports are designed to support:

- Audit readiness
- Gap analysis
- Regulatory reporting

- Evidence reviews

## Export Content Includes

- Selected compliance framework (e.g., SOC 2, ISO 27001, PCI DSS, CMMC L2)
- Requirement and control-level status (Pass / Fail / Manual)
- Mapped findings supporting failed requirements
- Scan date and time
- Provider and region scope (if applied)

## Supported Formats

- **PDF** – Audit-ready, framework-aligned reports
- **CSV** – Detailed control and requirement data for further analysis

## Common Use Cases

- Delivering compliance snapshots to auditors
- Demonstrating continuous compliance over time
- Supporting pre-audit readiness reviews

---

# Findings & Risk Report Exports

## Purpose

Findings exports provide detailed, actionable data for remediation planning and tracking.

## Export Content Includes

- Finding ID and title
- Severity (Critical, High, Medium, Low)
- Affected resource(s)
- Cloud provider and region
- Service type (IAM, S3, EKS, RBAC, etc.)
- Finding status (Fail, Pass, Muted)
- Scan reference

## Supported Formats

- **CSV** – Ideal for:
  - Ticketing system imports
  - Remediation tracking
  - Third-party analysis

## Common Use Cases

- Assigning remediation tasks to engineering teams
- Tracking progress over time
- Supporting risk exception reviews

---

# Analytics & Dashboard Exports

## Purpose

Analytics exports support **executive and leadership reporting**.

## Export Content Includes

- Summary charts and visuals
- Aggregate counts by severity
- Provider-level posture metrics
- Compliance readiness snapshots

## Supported Formats

- **PDF** – Executive-friendly summaries
- **Image exports / screenshots** (where applicable)

## Common Use Cases

- Quarterly posture reviews
- Board reporting
- Leadership briefings

---

# Using Filters for Targeted Reports

All exports respect **active filters**, including:

- Cloud provider
- Region
- Compliance framework
- Scan selection
- Mute lists (excluded or included findings)

This ensures:

- Consistent, repeatable reporting
- Accurate scope definition for audits
- Reduced noise in shared reports

---

## Best Practices for Exporting Reports

### For Audits & Compliance

- Export PDF compliance reports with region and framework filters applied
- Include scan timestamps for traceability
- Retain prior scan exports to demonstrate continuous compliance

### For Remediation Tracking

- Export findings in CSV format
- Include only high and critical findings when assigning tasks
- Maintain historical exports to show progress

### For Executive Reporting

- Use analytics PDF exports with muted findings excluded
- Focus on trends and severity summaries
- Keep reports high-level and outcome-focused

---

## Summary

AiVRIC's reporting and export capabilities enable organizations to:

- Produce audit-ready compliance documentation
- Share consistent, scoped security findings
- Support executive, technical, and compliance audiences
- Power managed GRC and advisory engagements

By leveraging filters, scan selection, and multiple export formats, users can generate **precise, purpose-built reports** directly from live posture data.
